Glucose Screening
A quick and easy finger-stick screening that measures blood sugar levels following eight hours of fasting, our Blood Glucose test helps identify diabetes—a major risk factor for heart disease and stroke—as well as monitor blood sugar levels for those already diagnosed with the disease.

High Blood Pressure Screening
Quick and easy, this test is performed at every one of our heart screenings. It involves a pressure cuff being placed around your upper arm to monitor both diastolic and systolic blood pressure.

Atrial Fibrillation Screening
Atrial Fibrillation is the most common type of heart arrhythmia (abnormal heartbeat). It occurs when the heart’s upper chambers (the atria) beat irregularly or quiver. Without an effective heartbeat blood isn’t pumped completely out of the atria, causing blood to pool and possibly clot.

Heart Disease is the #1 Cause of Death in the United States Each Year.
Why Would You Not Offer Health Screenings to Your Employees?

Wellness Screening Package Includes:

- Ejection Fraction
- Complete Lipid Panel Screening
- C-reactive Protein Screening
- Abdominal Aortic Aneurysm Screening
- Glucose Screening
- High Blood Pressure Screening
- Atrial Fibrillation Screening
